User Manual

THE FOLLOWING TERMS AND CONDITIONS APPLY:

While all attempts have been made to verify information provided, neither I, nor any ancillary party, assumes any responsibility for errors, omissions, or contradictory interpretation of the subject matter herein.

Neither I, nor any ancillary party, assumes any responsibility for the content that is prepared and/or distributed by the user of this software.

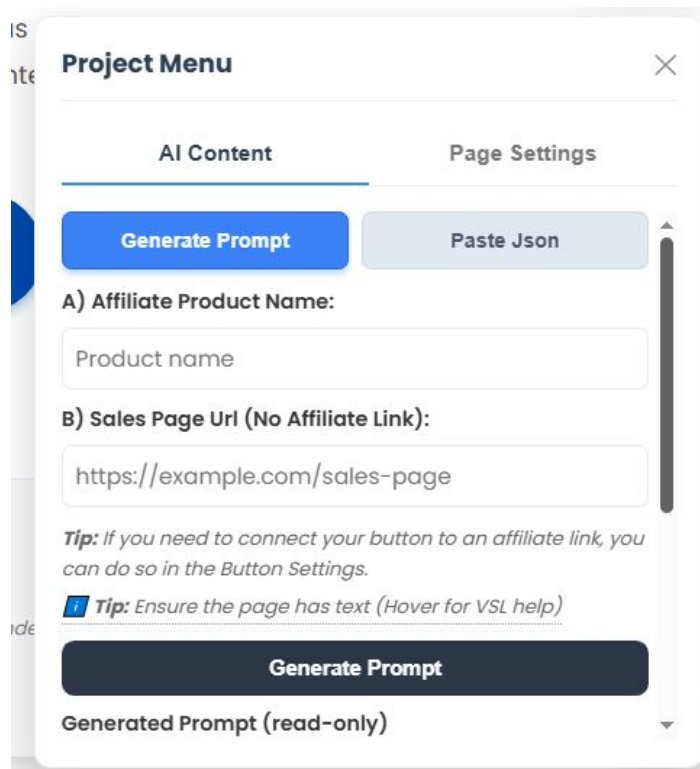

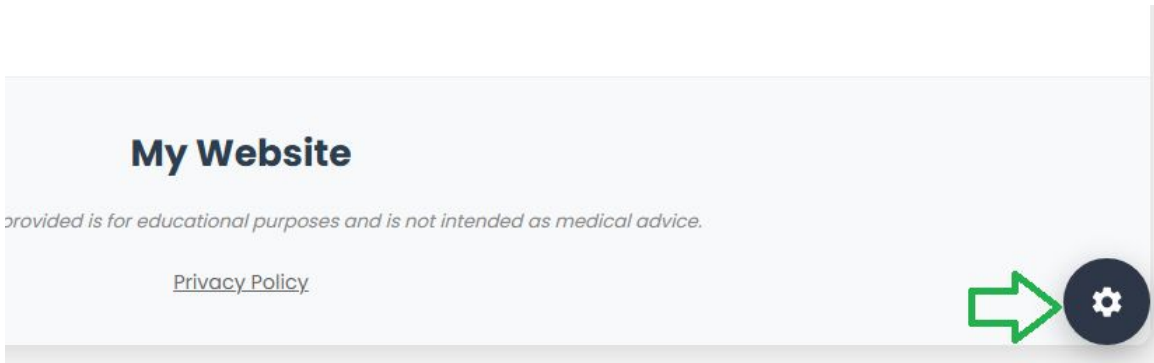

As the FTC Rules requires, we do not guarantee or imply that by using this tool, you will get rich or make money at all.

Software and associated files is distributed as is without any warranty of any kind, either express or implied. Software and associated files is not freeware or shareware.

Selling or distribution of the code (in whole or in part) of this program without prior explicit consent is expressly forbidden.

Using the Software.

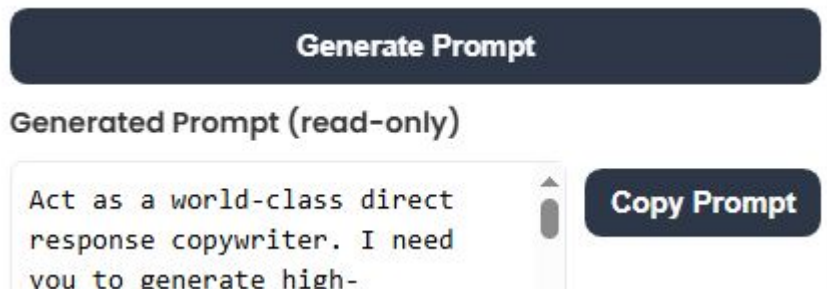

To use the software, first go to this button and enter some details for the product that you want to promote.

Sales Page Url Tips:

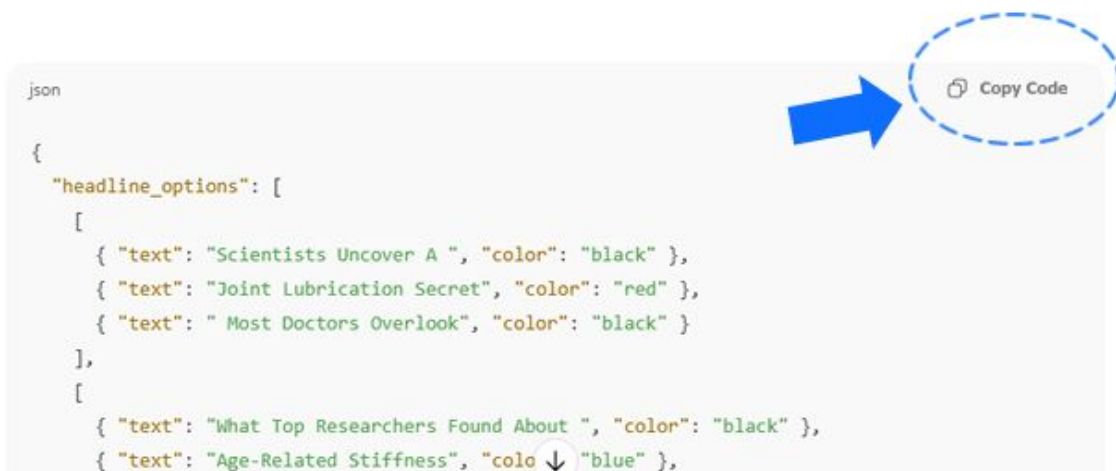

- For the sales page url, don't use your affiliate link. Instead, enter the product url.
- Ensure the page has text.
- If you enter a VSL sales page without text, look for an alternative sales page containing text (sellers usually put a 'Prefer to Read?' link to an alternative page - in that case, you can use that url).

Then click “Generate Prompt” and “Copy Prompt” (to copy the prompt to the clipboard).

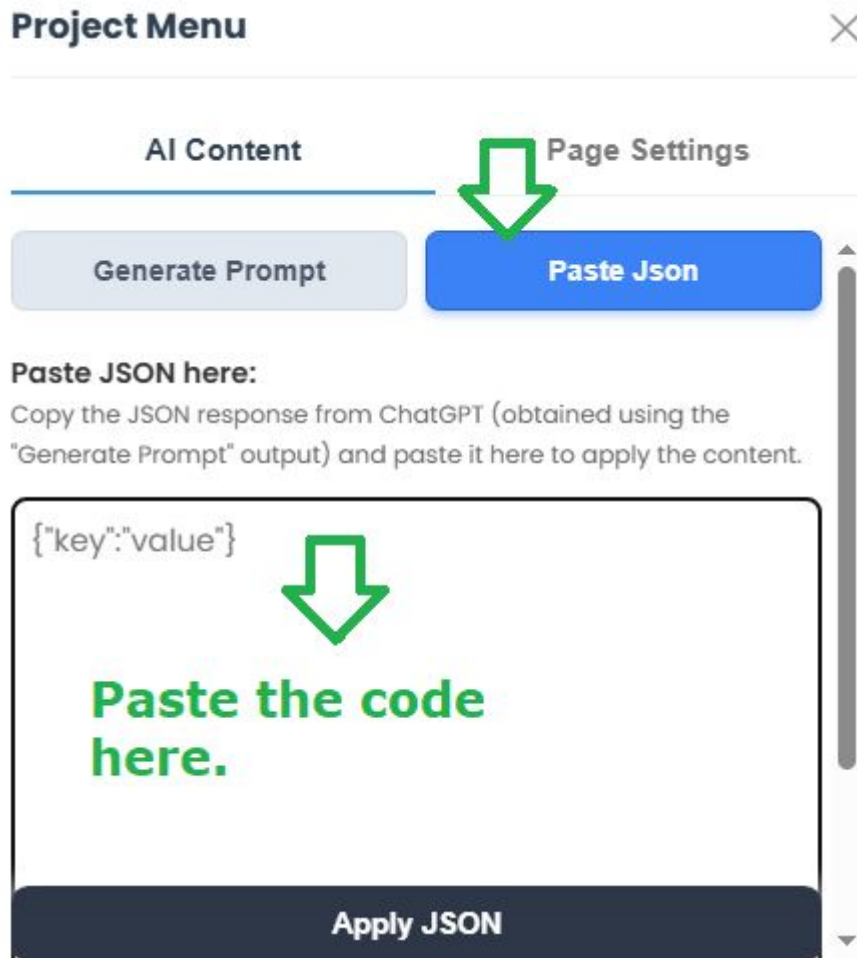

After this go to ChatGPT and paste the prompt.

After some seconds, you'll get something like this.

Click “Copy Code”...

And paste the code inside the “Paste JSON” tab.

Then click “Apply JSON” and your affiliate page will be ready!

Comments:

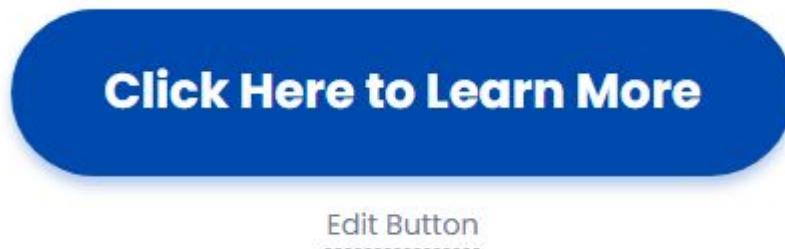

- If you receive a JSON error, ask ChatGPT to fix the JSON error.
- If ChatGPT can't analyze a website because a website has blocked the access to it (this is very rare but may happen), then we recommend to use the sales page of an affiliate (one with good material) as a sales page url (you should get similar results).

Customizing Your Affiliate Page.

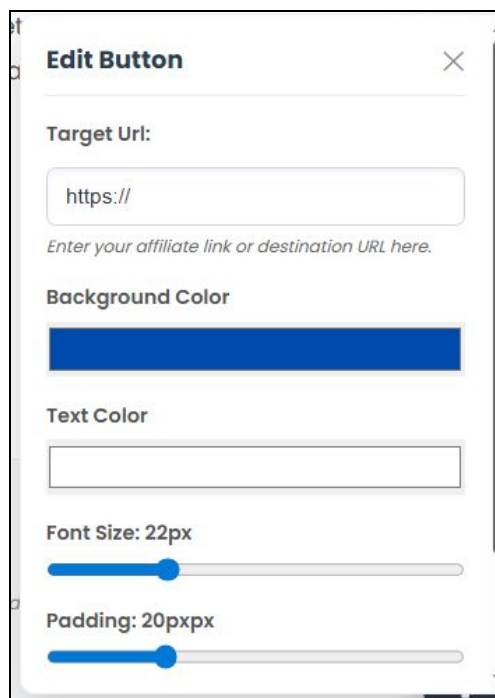

Customizing your sales page is easy. If you need to modify a text, just click it and you'll be able to change it.

The same if you need to change an image.

If you want to add your affiliate link, click "Edit Button"

From there you'll be able to enter your affiliate link...

A screenshot of a settings dialog box titled "Edit Button". It contains a "Target Url:" field with "https://" entered, a "Background Color" field with a blue color swatch, a "Text Color" field, a "Font Size: 22px" slider, and a "Padding: 20pxpx" slider. The dialog box has a close button (X) in the top right corner.

You can also customize other button settings.

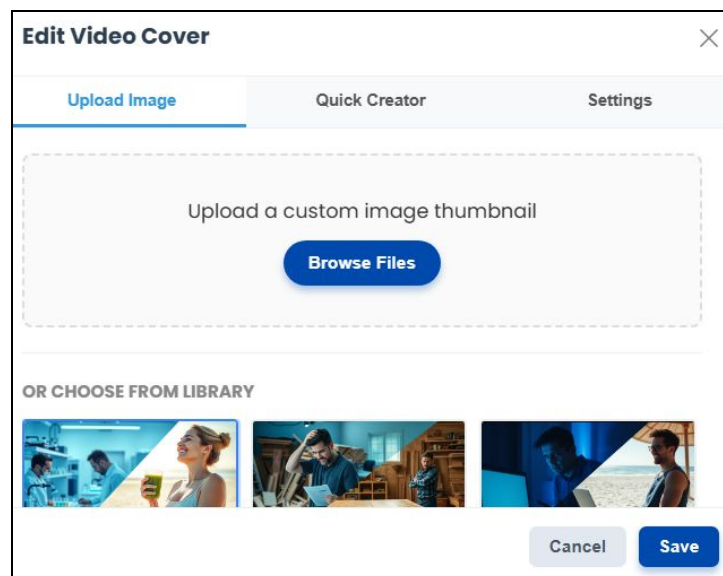

The following section allows you to use an image / text that looks like a video.

After exporting the page, if your visitors click it, they will go to your affiliate url.

If you need to customize this section, just click it.

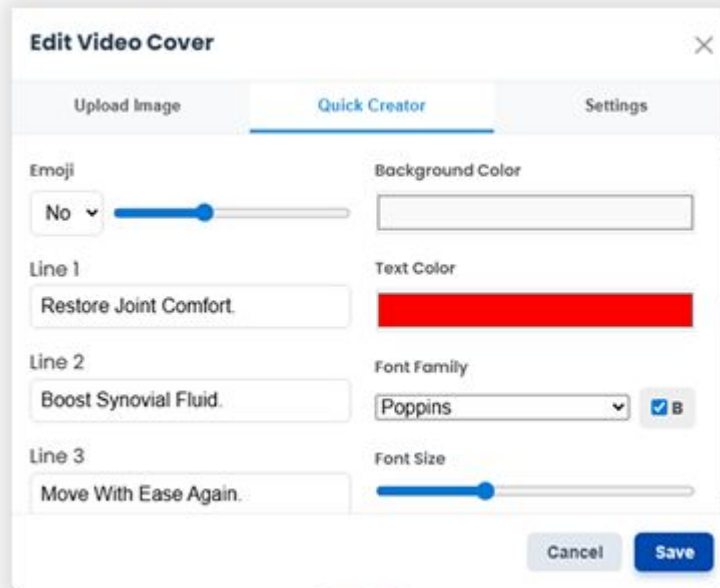

You'll see something like this...

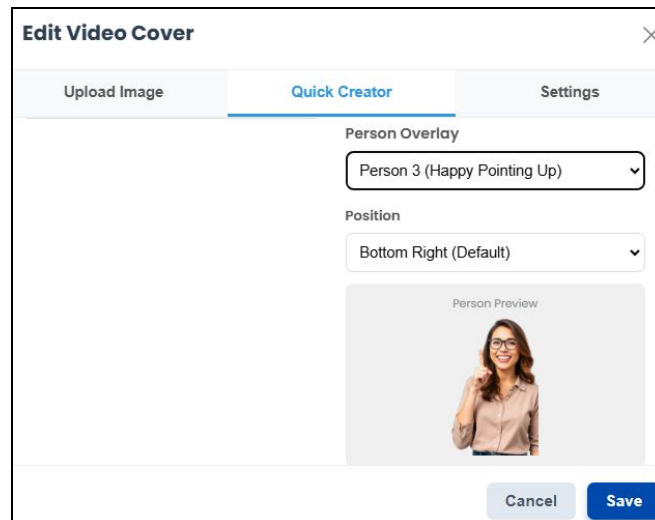

Basically, you'll find an option to create this "Video-Like" section from:

- An Image (Built-in or your own)
- Text ("Quick Creator"). This can help you to move very fast

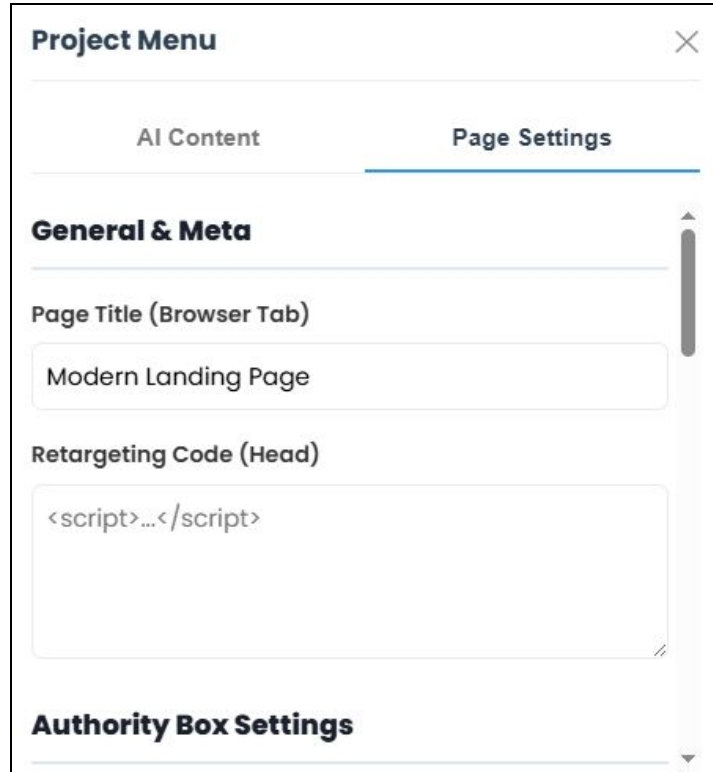

Here is the "Quick Creator" tab:

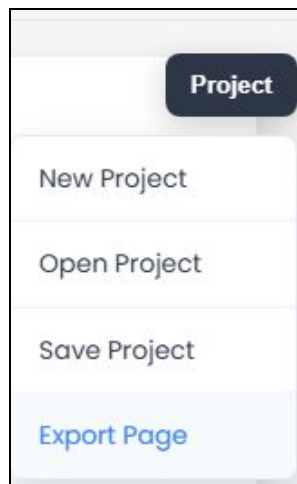

You can enter up to 3 lines of text. And if you scroll down, you'll find an option to use a "Person Overlay" (this will make your images look cool with just 1 click).

“Page Settings” Tab: From here you can set your page title (browser), enter a retargeting code (Facebook etc) if you want, enable / disable the authority box, and change your “Privacy” content.

Once you’re ready, click “Export Page” to download a copy of the affiliate page.

This will download a .zip with a copy of your affiliate page.

The .zip files includes:

- Your affiliate page (index.html)

Other related files.

After unzipping the .zip file, just upload everything to your website (can upload it to a subfolder like yourwebsite.com/someproduct) and you're ready to go.

Pro Version.

In the Pro version you can find extra features that you can easily activate with 1 click.

- In the "Video Cover" Settings, you'll find settings to add different elements that can help you to get more clicks to the cover.

- In the "Page Settings" you'll find an option to enable "Social Proof Avatars" (you can change the order of these avatars using drag and drop and you can also replace them with your own images).

- In the "Page Settings", you can also enable "Exit Popups" (just enter a text, a url and that's all).

- Conversion Tracking: If you want to pass tracking codes (good if you're using PPC campaigns and want to know which ads are giving you sales), just follow these steps:

Step 1: Pass the tracking code to your page using ?id=yourtrackingcode

Example: <http://www.yoursite.com/?id=something>

Step 2: Use the tag #ID# inside your affiliate link (you'll put #ID# where you want to insert the tracking code). That tag will be replaced by your tracking code. If no code is passed in the url, the system will use "na" (not available) as tracking code.

That's all!
