## User Manual

### THE FOLLOWING TERMS AND CONDITIONS APPLY:

While all attempts have been made to verify information provided, neither I, nor any ancillary party, assumes any responsibility for errors, omissions, or contradictory interpretation of the subject matter herein.

Neither I, nor any ancillary party, assumes any responsibility for the content that is prepared and/or distributed by the user of this software.

As the FTC Rules requires, we do not guarantee or imply that by using this tool, you will get rich or make money at all.

Software and associated files is distributed as is without any warranty of any kind, either express or implied. Software and associated files is not freeware or shareware.

Selling or distribution of the code (in whole or in part) of this program without prior explicit consent is expressly forbidden.

# Using the Software.

To use the software, first go to this button...

... and enter some details for the product that you want to promote.

**Generate Prompt** **Paste Json**

**Product Name**  
Plant Based Cookbok

**Product URL**  
<https://www.plantbasedcookbook.cc>  
Please enter the official product sales page URL (not your affiliate link).

**Number of Bonuses** **3**

Select how many unique bonuses the AI should brainstorm.

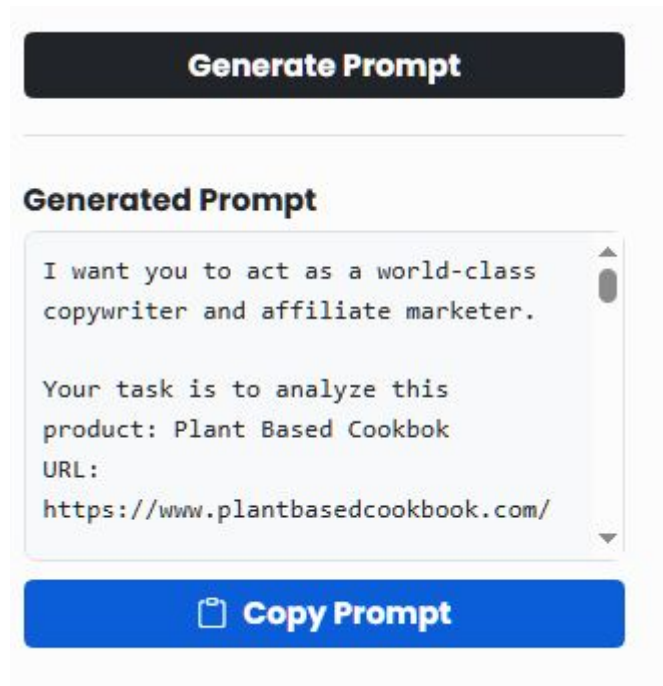

**Generate Prompt**

---

### Sales Page Url Tips:

- For the sales page url, don't use your affiliate link. Instead, enter the product url.
  - Ensure the page has text.
  - If you enter a VSL sales page without text, look for an alternative sales page containing text (sellers usually put a 'Prefer to Read?' link to an alternative page - in that case, you can use that url).
- 

Then click “Generate Prompt” and “Copy Prompt” (to copy the prompt to the clipboard).

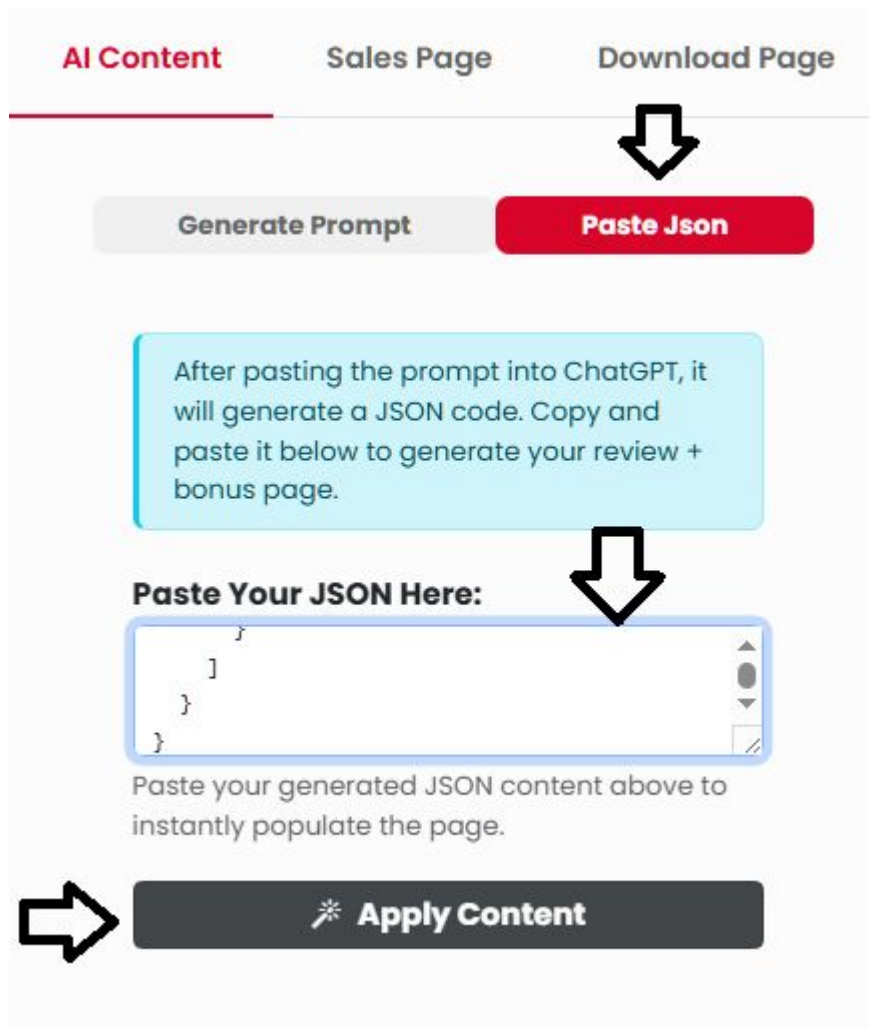

After this go to ChatGPT and paste the prompt.

After some seconds, you'll get something like this.

Click "Copy Code"...

And paste the code inside the "Paste JSON" tab.

Then click “Apply Content” and your affiliate page will be ready!

### Comments:

- If you receive a JSON error, ask ChatGPT to fix the JSON error.
- If ChatGPT can’t analyze a website because a website has blocked the access to it (this is very rare but may happen), then we recommend to use the sales page of an affiliate (one with good material) as a sales page url (you should get similar results).

## Customizing Your Affiliate Page.

Customizing your sales page is easy. If you need to modify a text, just click it and you’ll be able to change it.

When you move the mouse over a section, you’ll see a div with some options To customize that element (change the container width, change color, duplicate it etc).

The main headline has an extra item (“Toggle Branding Image”) which allows you to add an image before the headline.

**Customizing Images:** The software will use some generic covers for your page. If you want to change them, just click the image that you want to change and replace it (you can use an image from your computer or from another website).

# Customizing The Page Tabs

Each affiliate page has 3 tabs:

- 1) Product Review and Bonuses
- 2) Affiliate Link (later you'll see how to enter your affiliate link).
- 3) "Unauthorized" Access Page

When the users click the third tab, they'll get instructions to get access access to the bonuses. That's the main purposes of this page (just ignites the desire for the bonuses and shows how to get them).

You can click this tab and edit this this content (recommended).

Comment: It's a good idea to show your visitors how to get access to your bonuses. This will change depending on the affiliate platform that you use.

For example, if you're using WarriorPlus or JVZoo, these platforms allow you to add your bonus download page url to your affiliate link. When someone buys through your link, they can also see your bonuses through their account under "My Purchases" link (or similar).

If you're delivering your bonuses through platforms that don't have bonus integrations (like ClickBank), just put instructions to contact you with the ClickBank transaction id after the purchase and mention that you'll deliver the bonuses within 24 hs (or something like that).

## Sales Page Settings.

From the "Sales Page" tab you'll be able to adjust different things:

- A) Page Title (this text appears in your browser tab)
- B) Your Affiliate Link
- C) Background Image and other settings.

**Project Settings** ✕

AI Content **Sales Page** Download Page

---

**Page Title**

This text appears in your browser tab and search engines.

**Your Affiliate Link**

This URL will be applied to Step 2 and all 'Secure Your Copy' buttons on the page.

## Download Page Settings.

The software will generate 2 pages for you:

- Affiliate Page (index.html)
- Download Page (download.html)

The “Download Page” will let your users get access to your bonuses.

You can customize the download page info from the “Download Page Tab”

AI Content Sales Page **Download Page**

---

This text appears in your browser tab.

**Thank You Page Headline**

**Thank You Page Sub-Headline**

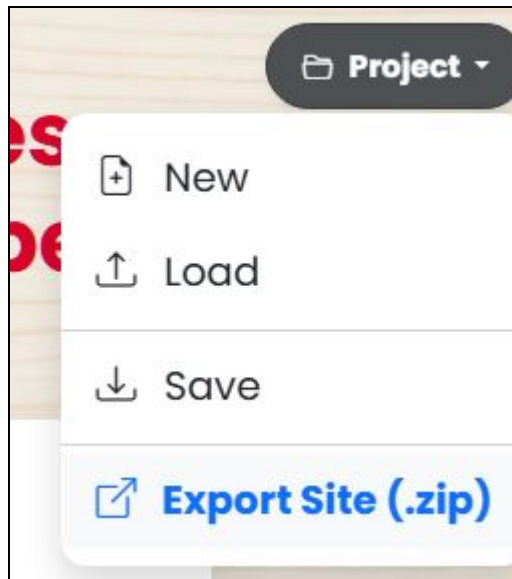

**Bonus Link Title**

**Bonus Link URL**

You can enter a custom message and the bonus link url (tip: it's a good idea to upload your bonuses as a single file, and upload it to place like Google Drive, Dropbox and then paste that url inside "Bonus Link Url").

## Exporting Your Site.

Exporting your site is easy. Just click "Project" -> "Export Site (.zip)" ...

And within some seconds, the app will download a copy of the affiliate site as .zip file.

This will download a .zip with a copy of your affiliate page.

The .zip files includes:

- Your affiliate page: index.html
- Your Bonus Access Page: download.html (you can rename for better access protection - example: download-292vnw.html).

Other related files.

After unzipping the .zip file, just upload everything to your website (can upload it to a subfolder like yourwebsite.com/someproduct) and you're ready to go.

Please remember that if you are using an affiliate platform that has bonus integration (WarriorPlus, JVZoo etc) , then you need to add your download page url.... to your affiliate link.

If not, you need to manually deliver that url to those who buy through your link, after confirming the transaction.

## WordPress User?

Although this software is not for wordpress, if you'd like to upload the generated pages to a WP site, here we'll give you some quick instructions that will help you to make it possible.

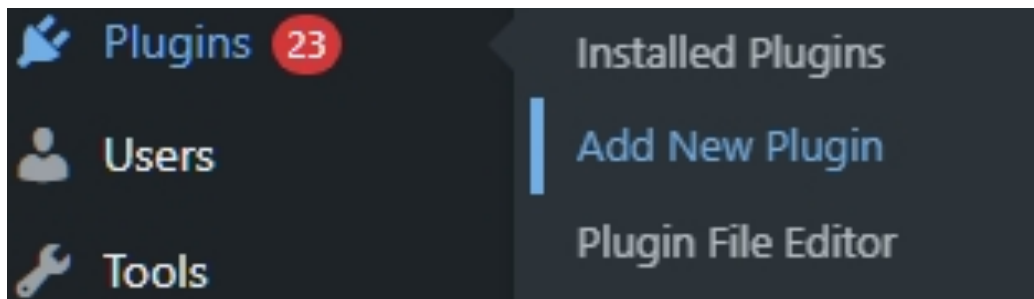

---

*Important: Making backups of your wordpress site is always a good practice before changing something. Although this is a simple process, we recommend you to make a quick backup of your WP site.*

---

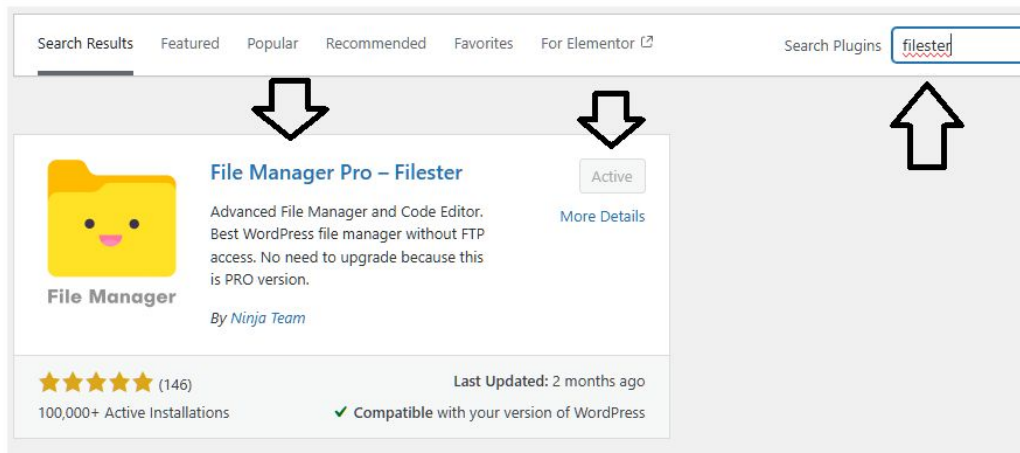

Step 1: Go to the Admin section of your WordPress site.

Step 2: Go to "Plugins" --> "Add New Plugin"

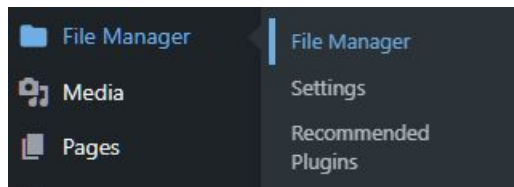

Step 3: Search for "Filester"..

This is the right plugin (has over 100K installations).

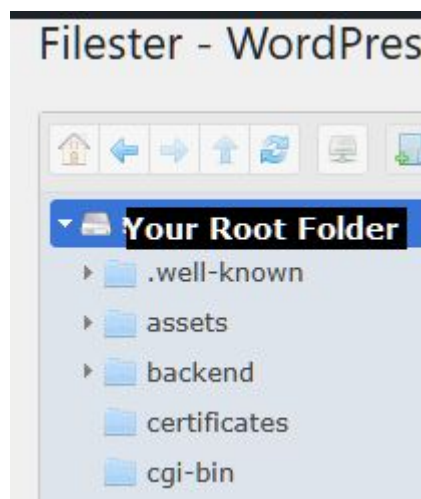

To install it, click “Install” and then click “Activate”.

After installing it, you’ll find its menu under the WP Admin Sidebar.

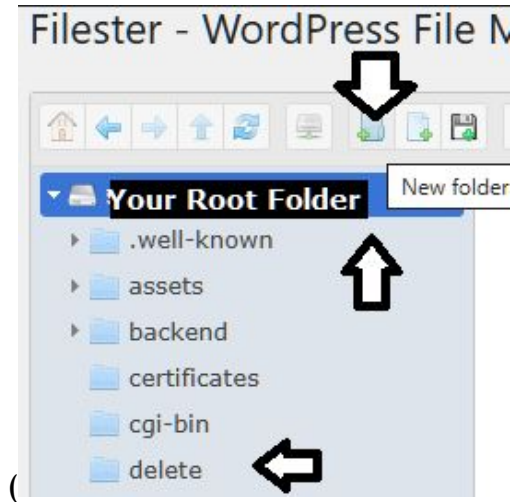

Click “File Manager” -> “File Manager”. You’ll see something like this (with different folders of course).

We call the first folder “The Root Folder”.

We’ll now create a new folder (i’ll name it “delete” but you can use any other name like “promos” etc) and we’ll upload our generated pages (the pages that we generated with “CommissionSniperAI”) there.

To do this, first click “The Root Folder”. Then click the “New Folder” icon (you’ll see the tooltip “New Folder” when you move your mouse over it).

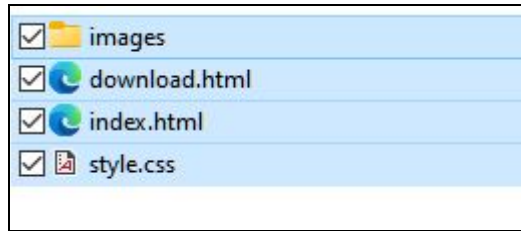

Then the software will ask you for the folder name.

Once it’s created you’ll see it in the tree (in this example, we see it with the name “delete”).

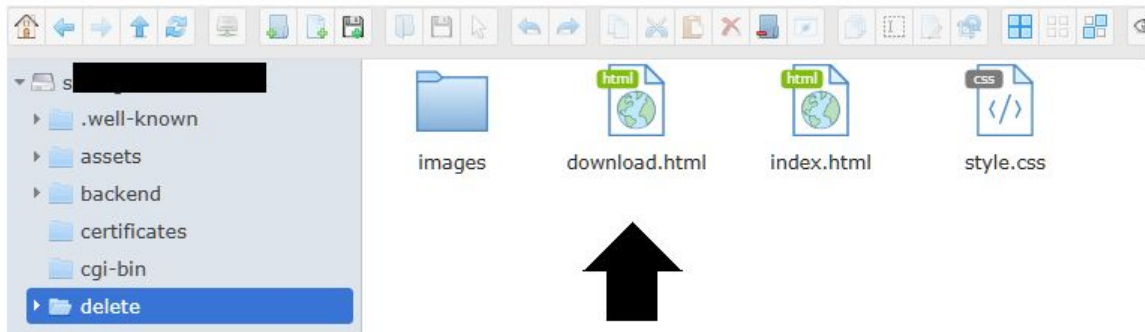

Click the new folder...

And drag and drop the content of your site there...

After uploading everything, you should see something like this.

To get access to a page just go to...

<http://www.yoursite.com/delete/index.html>

*(replace yoursite.com with the name of your site, and "delete" with the name of your folder)*

... and you'll be able to get see your page.

That's all!
